

AI TECHNICAL ANALYSIS ON DEMAND

What tradr does ·

Claude reads the chart. You get the entry, stop, and target — explained in plain English. Works on US, ASX, LSE, TSX, NZX, plus crypto and FX.

From \$19/mo · 30-day money-back

Founder lock-in \$14/mo for life · first 500

01 What it does

- ◆ Reads any chart with Claude AI and returns a structured trading thesis: setup, bias, confidence, entry, stop, two targets, risk:reward, plain-English summary, full rationale, bull case, bear case, invalidation level, what to watch for, support and resistance levels.
- ◆ **Boomer-mode summary** on every analysis — no jargon, just what's happening in everyday words.
- ◆ **Fundamentals translated to plain English** — "trades at 35× earnings, twice the S&P average" instead of bare P/E numbers.
- ◆ **Earnings countdown chip** — flags any stock with earnings inside 14 days so you don't enter trades blind.

02 Markets covered

- ◆ **US stocks** — NYSE, NASDAQ, AMEX via Massive Markets + Yahoo fallback.
- ◆ **Australia** — ASX via EODHD, including dual-listed companies.
- ◆ **UK · Canada · NZ** — LSE, TSX, TSXV, NZX via EODHD.
- ◆ **Crypto (24/7)** — BTC, ETH, SOL, XRP, ADA, DOGE, MATIC, AVAX, LINK, DOT, LTC, BNB.
- ◆ **FX** — EUR/USD, GBP/USD, USD/JPY, AUD/USD, NZD/USD.
- ◆ **Multi-market search** — type a ticker, see every exchange it lists on. Pick your venue.

03 Indicators & timeframes

- ◆ Three timeframes: 1-day (swing), 1-hour (active), 15-minute (intraday).
- ◆ Four lenses: **Standard** (balanced), **Momentum** (trend-friendly), **Mean-reversion** (fades), **Conservative** (textbook only).
- ◆ Full indicator stack: RSI 14, MACD, EMA 9/21/50/200, ATR 14, Bollinger Bands, trend detection, recent swing high/low.
- ◆ Click any indicator for a **plain-English explanation** of what it measures, where the current reading sits on its scale (with a mini gauge), and what trade is inferred from it.
- ◆ 5-dot confidence scale showing how textbook the setup is — not how likely it is to win.

04 Watchlist & alerts

- ◆ Save tickers to a personal watchlist with per-ticker alert triggers.
- ◆ Auto-checks every 15 minutes during the ticker's home market hours (US, ASX, LSE, TSX, NZX detected automatically).
- ◆ Trigger options per ticker: **any setup, confidence ≥ 4** , or off.
- ◆ Email alerts from alerts@tradr-pro.com — verified domain, not a no-reply.
- ◆ Browser push notifications — instant pop-up on desktop or Android.
- ◆ Reply-to is hello@tradr-pro.com — replies land in a real human inbox.

05 Follow-up chat & PDF export

- ◆ Ask Claude follow-up questions on any analysis — "what if it breaks below the swing low?", "how does this compare to last quarter's setup?"
- ◆ Conversation context is grounded in the analysis JSON and indicator data, not generic chat.
- ◆ **One-click branded PDF** of any analysis — plain-English summary, all levels, bull/bear cases, indicators, FMA-safe disclaimer, page numbers.

06 Pricing

FREE

\$0 forever
